

Quick Revision and Answer Hints

Use these points for last-minute revision. For long-answer questions, write a definition, syntax, explanation, program, and output or conclusion.

- Clean code: readable, maintainable, testable, meaningful names, low duplication.
- `input()`: reads a string; convert using `int()` or `float()` when required.
- `if/elif/else`: evaluates conditions in order.
- `range()`: produces a sequence of integers and excludes the stop value.
- Function: reusable named block; `return` sends a value back.
- List: ordered and mutable; tuple: ordered and immutable.
- Set: unique values; dictionary: key-value pairs.
- Class: blueprint; object: instance; `self`: current object.
- Inheritance: reuse or extend parent behavior.
- Polymorphism: same method interface with different implementations.
- DRY: avoid repeating the same knowledge or logic.
- SOLID: five principles for maintainable object-oriented design.
